## TORQUE MASTER

Playing an Imperative Role in Leading the Indian Industrial Hand Tools Market Ahead

Owing to the rising usage of these tools in Heavy Industries, Thermal Power Plant, Petrochemicals, and petrochemical industry and automotive industries, the manufacturing market of industrial hand tools has upsurged significantly across the globe. Currently, at a burgeoning phase, the Indian industrial hand tools market is expected to demonstrate significant growth in the upcoming years, especially due to the rise of automobile products, as their assembly lines will need the industrial hand tools to assemble them. Playing an imperative role in leading the Indian industrial hand tools market ahead, Torque Mater has embarked on a journey to manufacture premium quality industrial hand tools. Comprehending the value of innovation Torque Master has been seamlessly working towards enhancing its core competencies across the industrial hand tools manufacturing segment, ever since its inception in 1998.

Equipped with the perfect amalgamation of people, process, and technology, Torque Master ensures the world-class quality of its products and industrial tools to its huge customer base across the globe. Owing to its continual investment in technology and experienced manpower, Torque Master has been able to provide its clients with quality products and services that are not only cost-effective but are always delivered on time. Apart from numerous products that Torque Master provides such as sockets, torque screwdrivers, torque multipliers, universal joints, stud tighteners, extension bars, square drive adaptors, reversible ratchets, sliding T handles, angle handles, ratcheting spanners, swivel handles, speed brace, hex drivers, hex adaptors, slugging

wrenches, tool kits, the flagship products offered by the Torque Master are torque wrenches.

### Offering Quality Products & Services

Reflecting on the USP of the products offered by Torque Master, Himanshu Chaudhary, CEO, Torque Master, states, "The current Indian industrial hand tools manufacturing market requires brands that can provide quality and cost-effective products that compete with the foreign brands as well. Emphasizing exclusively on quality, we try to manufacture products that can compete with the global brands but at an Indian price. Unlike other companies who prefer to sell their quality products in the international market and keep their substandard products for the Indian market, the quality of all our products remains the same irrespective of their availabilities in different countries. For example, if you pick a product of Torque Master in Turkey, UK, Spain, US or in India, they all will be similar in terms of quality". Starting its journey with 3-4 machines manually operated machines, Torque Master has equipped itself with state-of-the-art computer numeric control machines, both turning centers as well as vertical machining centers, as of now. It also has a CAD-CAM system, 3D modeling, 3D rendering, stress analysis, simulations, and everything inno-

vative that technology has to offer. Having all these technologically-advanced machinery available at its disposal, Torque Master effectively utilizes them to reap more benefits and compete with global brands. "For the designing part, we have a cloud-based CAD-CAM system. Through it, we can 3D model the entire part that we want to manufacture and create an assembly. So, from that itself, we can derive the computer-aided manufacturing program and transfer it directly to our CNC machines to avoid any possible human error", shares Himanshu.

“Emphasizing exclusively on quality, we try to manufacture products that can compete with the global brands but at an Indian price

Demonstrating exponential growth so far, Torque Master has established itself to be the OEM supplier of a lot of leading brands that have been existing for almost 100 years. "In the coming days, we would like to expand our product portfolio. Meanwhile, we are exploring several exciting opportunities that I see especially in the torque wrenches business. Currently present in the mechanical type torque wrenches business, we are looking forward to venturing further into dial type, electronic type, and slip type. There are several other product portfolios as well that we think we should explore, so that, we will be able to provide a compelling solution to our clients", Concludes Himanshu. [In](#)
